# Company Overview

Hotel Development | Hotel Operator

CIC Hospitality manages 50+ hotels in the Nordics region, some of which operate independently and use different types of software.

CIC was started by four colleagues with a hotel background who wanted to challenge the hotel industry with an innovative and technological hotel concept focused on the environment and, not least, to create workplaces where employees thrive and have fun.

The owners of CIC decided early on to focus on a win/win approach in negotiations and cooperation with others.

# The Challenge

The group CFO requires consolidated data for monthly board reports. This data must be sourced from a wide range of different systems, each specific to the respective hotels. This is a combination of different accounting systems, planning software and PMI software.

Consolidating data from diverse hotel SaaS platforms for reports was time-consuming.

Standardizing accounting data (e.g. mapping charts of accounts, currency conversion) was challenging.

Maintaining and updating report layouts in Google Sheets was cumbersome and lacked flexibility.

# OUR SOLUTION

1

Pelican centralizes data from various hotel SaaS platforms, eliminating silos and enabling seamless analysis.

2

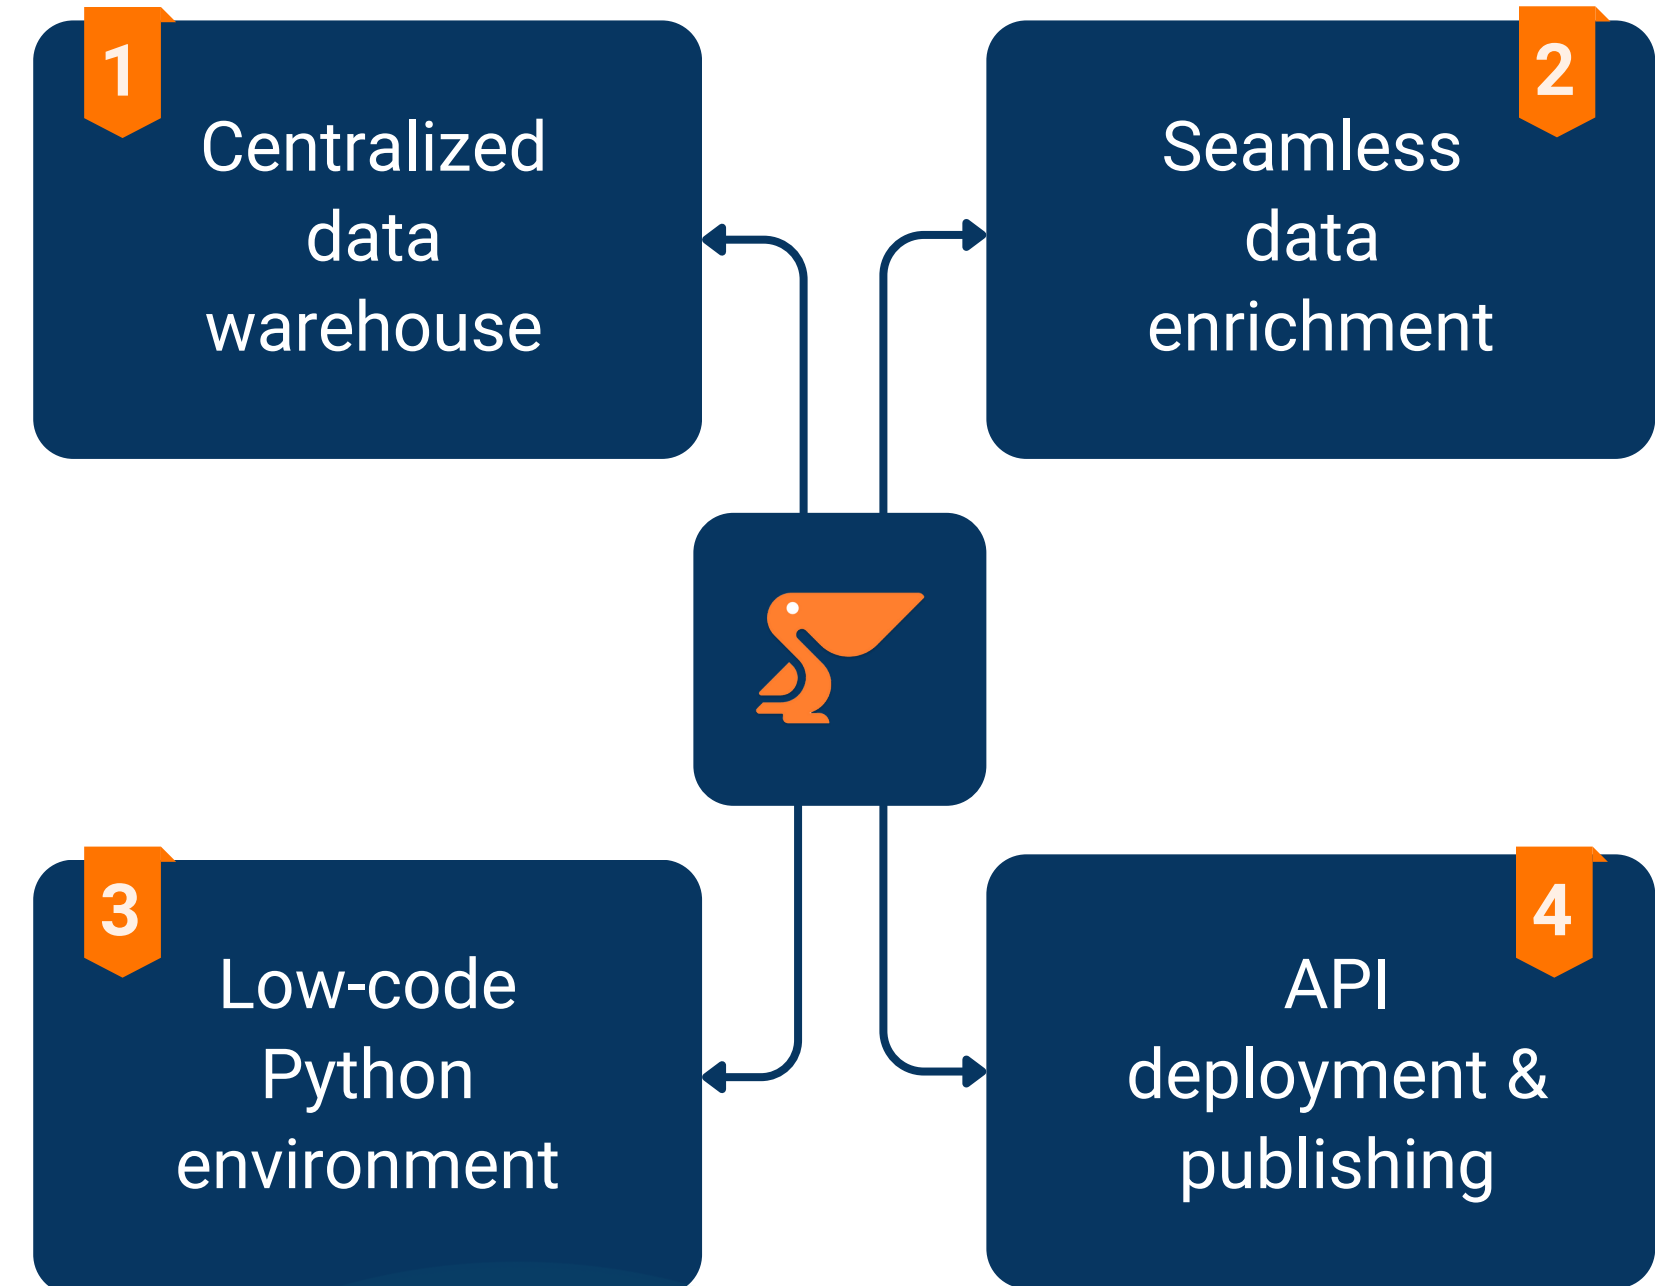

The integrated Chart of Accounts in Pelican automatically maps transactions, ensuring consistency and accuracy.

3

Public API connections within Pelican fetch live currency conversion rates, eliminating manual calculations and ensuring accuracy.

4

Pelican transforms and aggregates data based on the Google Sheet template, generating fully automated board reports monthly.

# RETURN ON INVESTMENT (ROI)

**30+**

hours saved per month

**120+**

SaaS sources connected

**50**

hotels included in consolidated reporting
